SARS-CoV-2 Bioinformatics for Beginners Course – Thank you!

Dear Mario Aldape Perez

On behalf of the SARS-CoV-2 Core team, our sincerest thanks for your dedication to the COG-Train and Wellcome Connecting Science SARS-CoV-2 Bioinformatics for Beginners Course as part of the course staff! In this role, you supported participants in learning the basics of bioinformatics and applying bioinformatics skills in the analysis of SARS-CoV-2 genomic sequences. This is a critical part of developing capacity for viral surveillance and global public health.

This course was a world first. Together we delivered a global course supported by 28 classrooms from 22 countries. We united over 356 participants from 37 different countries. You provided both academic and administrative support to your classroom during lecture and practical sessions and ensured all the logistics for your class to provide a smooth experience for participants. You did this at times which allowed you to be in contact with those across the world!

We hope that you enjoyed this experience and that you remain in contact with us and the other network connections you have created in this course.

Wishing you all the best in your bioinformatics endeavours.

Kind Regards,
SARS-CoV-2 B4B Core-Team
